

Control+

BJ-259

Control the environment from your mobile phone or tablet

Control any device you want at home **from your Android or iOS tablet or smartphone** using this customisable remote control.

Thanks to its **infrared learning system** you will be able to control your household infrared-enabled devices such as TV, HiFi, etc..

With the appropriate accessories you will control also other elements like doors, lights, beds, ceiling hoists, blinds, electrical appliances and warning alarms.

This device is part of our [environmental control](#) solution.

Control+ works with the free app Control, which can be downloaded from [Google Play for Android](#) devices and from the [App store for iOS](#).

With Control + and the Control app you will be able to:

- **Memorise** the functions of **any other remote control** such as a television or similar, using **infrared** learning technology.
- **Control** other elements such as doors, lights, beds, telephones, hoists, blinds, through the **receivers** of our environmental control solution, using the radio frequency technology to overcome walls and obstacles.
- Create **unlimited customized templates** suited to your needs as well as take advantage of all those included by default.
- Select an **unlimited number of buttons** and **layout** of each template.
- **Customize** the **function of each button** according to your needs.
- **Customize the buttons** with the images you want,

including photos that you take with your own phone.

- **Create macros:** activate a sequence of actions with a single button. For example: a button is pressed on the smartphone and all the lights are turned off, the blinds are lowered and the television is switched off.
- It has a **switch output** on the Control+ itself to which it is possible to connect an adapted device and control it from the tablet or smartphone.
- Thanks to the **available switch input** it is possible to give a control command even when the tablet or smartphone is turned off. This can be useful, for example, to activate an alarm or to open a door without having the phone on.
- **Compatible with any phone or tablet access system** (mouse, scanning...).

HARDWARE:

- Bluetooth Low Energy.
- Radio Frequency: 433 MHz (ICM).
- Infrared Frequency: 39 kHz.
- Size: 81 x 49 x 12 mm.
- Compatible with BJLive! Enablers.
