

LED UV Spotlight

BJ-EIFUVL

LED Ultraviolet spotlight

A powerful, long-lasting **LED spotlight** that emits ultraviolet light in a specific area.

This lighting element can be controlled with the **MyRoom! Center**, which allows you to **change the colors** and adjust the **intensity** of the lighting **depending on the activity and the ambient noise**.

This spotlight can be used in sensory rooms (not with the SHX System).

Use it in [ultraviolet corner](#). Open a door to the **multisensory world** by installing an ultraviolet corner in your Snoezelen or sensory room, or a small space in any bedroom. When the lights go out, the darkness reveals mysteries and objects that only shine in this corner.

This DMX spotlight is composed of 55 high brightness long-life LEDs.

- DMX Lamp with 55 LEDs
- Works on 230V
- Not compatible with the SHX System for multisensory rooms
- Comes with a remote control
