Interactive panel

BJ-EP2

Large 40-inch touch screen with computer and more than 50 activities

This panel with a large screen (40") allows you to install software for multisensory, voice and touch learning interaction. The system offers applications for **voice-based interaction** with the microphone, **touchscreen or external switches**. They can be used to work on cause and effect, vocalization, mobility, play, swiping, memory...

In addition to the activities included, any **Windows-compatible application** can be installed.

The padded protection makes it a safe element, ideal for demanding environments such as multisensory rooms.
