SHX Rack

BJ-EX02, BJ-EX02-I
The most immersive system for a sensory room

The **SHX Rack** is everything you need for enjoying the SHX System inside your sensory room and thus, being able to create **your own thematic environments** within the room.

The SHX System opens up a whole new world of possibilities in **multi sensory environments**, since it allows the user to **interact with the room** and create any combination of surrounding effects such as: **lighting**, images, videos, sounds, vibration, music, effects on the **bubble tube**, fiber optics, as well as other enveloping effects that will make the experience **really immersive**. You can trigger the different effects as you like, either individually or by combining a group of actions at the same time, according to what you want to convey; and even create your own contents by using your own videos and pictures. The SHX allows you to display in the room virtually anything you have in mind.

Besides the server, the software and all the multimedia elements, this product also **includes the Android tablet (also available with iPad)** with which you can activate all the effects of the room, and the scenes and configurations included by default or added by you.

The choices are endless... A video of a motorbike while we feel the vibration of its engine; a picture of an animal while we hear its name, hear its sound and feel its vibration; a projection of an idyllic beach in a blue-colored environment while we feel the sea-breeze; diving under the sea, etc.

This equipment includes all the necessary elements for experiencing all the SHX configurations and possibilities pre-installed as well as for **creating your own contents.** It is prepared to support **2 projections** as well as **4 vibroacoustic elements** in the room, so you can virtually display anything you have in mind.

There are no limits!

Install the SHX rack and fill the room up with light and inspiration!
