Control USB

BJ-254

Control any household device from your computer

This remote control **allows you to control the devices of your home** in a personalized way from your computer **using your usual access method** (mouse, keyboard, voice control, gaze, ...).

You can easily **control televisions, decoders and multimedia players** (thanks to the already included device database and its infrared learning system), as well as other elements of your house such as **doors**, **lights**, **beds**, ceiling hoists, **telephone**, **blinds**, electrical appliances and warning **alarms** (through one of our enablers).

We have upgraded this remote so that it offers even better features than before. Check it out below!

Compatible with all TV's and decoders

You don't have to point at the TV: This new version of USB Control provides **more power and an increased IR beam angle**, so you no longer have to point at the TV.

Already programmed: This product **incorporates the controls of the main television manufacturers already recorded** (Samsung, LG, Toshiba, Sony, etc.). Press a button and your remote is immediately configured via a grid of the most common actions that you can also customize to your liking. The most common decoders and multimedia players are also already programmed (Apple TV, Movistar +).

Compatible with all decoders: In addition to being compatible with any decoder, it incorporates the **most common decoders and multimedia players**: Apple TV, Movistar +. (Other decoders to incorporate shortly, ask us about yours and we will add it).

Other devices pre-configured

Control of the bed and other receivers already programmed: **Configure with a single click the radio-frequency enablers** to

control your bed, warning alarm, telephone and Enabler Socket +. Everything is programmed by default and included in the database of the BJ Control program, to make it as simple as possible. You can control these items without aiming, even if they are in another room.

Control from Grid 3

Control your home from Grid 3: You **can control your devices easily from Grid 3** using your usual access method. The TV control is already pre-programmed for Grid 3.

Unlimited and customizable

Customize it your way: Customize the function that each button performs according to your needs. Select the number of buttons and their distribution in each scene. Customize the buttons with the images you like best with the included BJ Control program.

Unlimited control: Control everything you want, you have an **unlimited number of different functions**. Also, you can create as many scenes (layouts) as you want. You also have the possibility of creating macros, so that with a single button you activate a sequence of actions.

Simple and effective: **Use it directly if you already have Grid 3 or download the 'BJ Control' software** for Windows here. Watch this video to learn how to set up your devices quickly and easily.
