Control USB RF

BJ-260

Add Radio Frequency to your communication device

Control any RF device you want from your computer.

Thanks to the **Radio Frequency system** you can control any household device connected to any of our enablers. Use Control USB as a complement to control your Infrared devices.

New smallest **appearance** for the device.

With the **appropriate accessories,** you will control also other elements like doors, lights, beds, ceiling hoists, blinds, electrical appliances and warning alarms.

- **Access to your computer** using your usual access system (mouse, keyboard, voice control,...)
- Control all you want, you can create an **unlimited number of programable buttons and scenes.**
- **Customize** the function that performs each button **according to your needs** with the BJ Control programmed.
- **Select the number of buttons** and their distribution in each scene.
- **Personalized each button** with the text and image that you like.
- With the **radio frequency system**, control the elements overcoming obstacles and walls; no need to aim.
- **Possibility of macros:** a single button activates a sequence of actions.
- **Fully compatible with Grid 3**: program your environmental control actions directly in Grid 3.
- **Control the environment from other programmes** as Tobii communicator, Mind Express, Powerpoint...

Customize your controller's functions and appearance with the **BJ**

Control programme included!
