

SHX Device

BJ-EX06

Customized welfare and leisure

The **SHX Device** has been created for these environments that already have most of the hardware need to build a Multisensory room in your home.

The SHX Device does not integrate a Multimedia computer in its features. It is composed just for the SHX Control device module that allows you to control the lighting, Radio Frequency, and vibration in/outputs.

The BJ SHX Control program and contents are in a USB stick for you to install in your computer. This allows **a series of actions to be activated** by selecting **SHX scenes**. You can activate **sounds and videos, control** elements such as the **bubble tubes and the optical fibers** or **change the color** of the room, either individually or by combining a group of actions at the same time.

The scenes are compiled in different SHX collections. The SHX System **includes various collections** that can be activated depending on your needs. They can be fully **personalized** and, if you prefer, you **can create new collections and scenes**.

Features:

- Luminea router (BJ-LWAP) included
- SHX Control Device module.
- SHX Control Software and contents on a USB stick.
- RF in/outputs
- Switch inputs
- IR record/outputs
- 20 DMX channels
