

Lumineia App

Control the colours in the light as never before

Control our [Lumineia devices](#) in a multisensory room, such as the [bubble tube](#), [fiber optic](#), [pit ball](#), [led lights](#), etc., through this App and engage users in activities adapted for different needs.

You will be able to control light as never before. **Lumineia App** has been designed with a focus on multiple therapeutic and educational purposes.

This App, which **allows you to control the light devices in a sensory room**, consists of two different categories of activities: Pixel and Sequencing. Each category allows you to **create your own unlimited activities** besides enjoying those that are included by default within the App.

Pixel

Touch an image and modify the colours in the room...

Within this category you can find images by default or upload your own images.

When touching a specific spot on the tablet's image, the Lumineia device(s) that you have will change its colour.

Use any image from the internet, take a picture with the tablet's camera or create your own drawing or image and use it as a personalized remote control.

Additionally, the application allows you to choose a neutral color (a color which does not change the color of the Lumineia device) and a color which turns off the Lumineia device's color.

In this way, it's possible to create a few or many color combinations, pictures, trace images, play with mazes, identify and associate colors with objects, play Simon Says, work on cause & effect exercises, express preferences and making choices, painting and other creative activities...

It's also fun to play "magic color" as the Lumineia device remains off until the user presses a specific color on the image. You can work on coordination (using a target image, a dartboard for example),

cognition activities (images to develop vocabulary) and anything related to a colors or objects.

Our App comes with 12 default Pixel activities but you can create as many as you want...

Sequencing

The App's sequencing category relates to recordings of a color pattern that the user creates, which can be linked to a song, sound or melody. Thanks to sequencing, both the therapist and the user can choreograph their own music and color combinations, work on memory related activities, sequences, rhythm, chromotherapy, emotions or the user's artistic expression.

Create your own activities and play with light as never before!

► Download now our [Multisensory Catalogue](#) and discover sensory rooms as you never imagined.

Features

- Free download on Google Play (launch date: Dec. 16th, 2019)
- Automatically detects the Luminea devices in close proximity and connects them to your home or center's WIFI network.
- Control all the Luminea devices on the same WIFI network, individually or all at once.
- Available for Android.
- Menus to create and edit new pixel and sequencing activities.
- Control bar to adjust luminosity, device selection, bubble control, etc.
