

Button 6

BJ-LCTRL

Change the colors of the tube or the fiber

This versatile control allows you to interact in a simple way with the elements of a multi-sensory room. It allows you to control the color and activation of any Luminea device such as a [bubble tube](#), [optical fibers](#), [ball pool](#), etc.

Press the button directly and you will change the color of the device. The remote is used to **control one or several Luminea devices individually or combined** and also as an [SHX System](#) controller.

When integrated into an [SHX sensory room](#), it allows you to activate the SHX scenes, which combine lighting, sound, image, video, vibration and other immersive effects.

Button 6 can be configured in five different modes:

- Tube Control
- Fiber Control
- Control of any other Luminea device
- Control of all Luminea devices at once
- SHX control

Features
